

To Whom It May Concern:

I am writing to voice my displeasure of the NAB attacking Satellite Radio.

Satellite Radio is the best thing to happen to radio in a very long time. It is the first chance that we as consumers and listeners can finally choose what WE want to listen to. After all, isn't America about Freedom of Choice?

For too long the listener has been subjected to listening to the same old pre programmed, tried tested and true same old songs over and over again.

In a normal radio market the commercial stations play whatever is going to get them the best ratings. Why the best ratings? Because it gets them more commercial sales in the market. Well here's some breaking news for you..... some people out there actually want to here some different songs on our radios once in a while. Actually a million XM customers alone should be able to show you that.

Until Satellite Radio we were subjected to the same boring crap again and again. And with how the large broadcast companies, such as Clear Channel Communications, keep buying up the markets we can't even have choice there by traveling into other markets. Instead we here the same cookie cutter programing on each and every Cleaer Channel station from market to market.

Now, for once, we have a choice. In fact over 100 choices in one little box. For once we can listen to whatever we want whenever we want. And if our mood changes next hour and we want something different, it's there with a push of a button. Finally we have Freedom of Choice. Finally we have choice. And just because some large Corporate America Broadcast Companies whined to the NAB you are forced to look into Satellite Radio.

Please let us have our choices and force these companies to work for a living and become competitive, before we have another monopoly on our hands like years ago with the phone companies.
